

BIOLOGY - GENERAL

Explore More About This Program: <https://cwi.edu/program/biology>

Program Description

The General Biology Associate of Science degree offers students the opportunity to be exposed to a greater diversity of biological topics than any of the other biology degrees at CWI. Training is broad, covering all areas of biology from the molecular to community levels of organization, with a focus on evolutionary principles and how they tie the life sciences together. The General Biology program offers students with broad interests the freedom to follow their specific academic goals. Elective flexibility allows for a degree program tailored to the individual needs of each student. Opportunities for internships and research are available. Students are encouraged to contact their advisors and their future transfer institution (if known) for additional information regarding the appropriateness of this major for their academic path.
